## Decision 1 Sorting Questions

2 Use the quicksort algorithm to rearrange the following numbers into ascending order. Indicate clearly the pivots that you use.

$$
\begin{array}{llllllll}
18 & 23 & 12 & 7 & 26 & 19 & 16 & 24
\end{array}
$$

2 (a) Use a shuttle sort to rearrange the following numbers into ascending order.

$$
\begin{array}{lllllllll}
18 & 2 & 12 & 7 & 26 & 19 & 16 & 24 & \text { (5 marks) }
\end{array}
$$

(b) State the number of comparisons and swaps (exchanges) for each of the first three passes.

4 (a) A student is using a bubble sort to rearrange seven numbers into ascending order.
Her correct solution is as follows:

| Initial list | 18 | 17 | 13 | 26 | 10 | 14 | 24 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| After 1st pass | 17 | 13 | 18 | 10 | 14 | 24 | 26 |
| After 2nd pass | 13 | 17 | 10 | 14 | 18 | 24 | 26 |
| After 3rd pass | 13 | 10 | 14 | 17 | 18 | 24 | 26 |
| After 4th pass | 10 | 13 | 14 | 17 | 18 | 24 | 26 |
| After 5th pass | 10 | 13 | 14 | 17 | 18 | 24 | 26 |

Write down the number of comparisons and swaps on each of the five passes.
(b) Find the maximum number of comparisons and the maximum number of swaps that might be needed in a bubble sort to rearrange seven numbers into ascending order.

2 (a) Use a Shell sort to rearrange the following numbers into ascending order, showing the new arrangement after each pass.

$$
\begin{array}{lllllllll}
28 & 22 & 20 & 17 & 14 & 11 & 6 & 5 & \text { (5 marks) }
\end{array}
$$

(b) (i) Write down the number of comparisons on the first pass
(ii) Write down the number of swaps on the first pass.
(c) Find the total number of comparisons needed to rearrange the original list of 8 numbers into ascending order using a shuttle sort.
(You do not need to perform a shuttle sort.)
(1 mark)
