

The sum of the lengths of the 12 edges of a cuboid is x cm. The distance from one corner of 23. the cuboid to the furthest corner is y cm. What, in cm<sup>2</sup>, is the total surface area of the cuboid?

A 
$$\frac{x^2 - 2y^2}{2}$$

$$\mathbf{B} \ x^2 + y^2$$

$$C \frac{x^2 - 4y^2}{4}$$

D 
$$\frac{xy}{6}$$

A 
$$\frac{x^2 - 2y^2}{2}$$
 B  $x^2 + y^2$  C  $\frac{x^2 - 4y^2}{4}$  D  $\frac{xy}{6}$  E  $\frac{x^2 - 16y^2}{16}$

Let the lengths of the sides of the cuboid, in cm, be a, b and c. So 4(a + b + c) = x. Also, by Pythagoras' Theorem  $a^2 + b^2 + c^2 = y^2$ . Now the total surface area of the 23. Е cuboid is

$$2ab + 2bc + 2ca = (a + b + c)^2 - (a^2 + b^2 + c^2) = \left(\frac{x}{4}\right)^2 - y^2 = \frac{x^2 - 16y^2}{16}$$
